

## ABSTRACT

This invention relates to a method for sharing information concerning medical treatment of an individual. The method includes using steps of a network system in which a plurality of hospital terminals, a plurality of user terminals, and a database terminal for managing a database of individual medical treatment information are connected via a communication network, wherein a user acquires a user ID, a user password, a second password, and a space in the database for storing individual medical treatment information, and a hospital acquires individual medical treatment information from the database or saves updated individual medical treatment information in the database using the user ID, the second password, the hospital ID, and the hospital password as keys.
